Problem Description:

How to create a basic Applet?

Solution:

Following example demonstrates how to create a basic Applet by extending Applet Class. You will need to embed another HTML code to run this program.

```
import java.applet.*;
import java.awt.*;

public class Main extends Applet{
    public void paint(Graphics g){
        g.drawString("Welcome in Java Applet.", 40, 20);
    }
}
```

Now compile the above code and call the generated class in your HTML code as follows:

```
<HTML>
<HEAD>
</HEAD>
<BODY>
<div >
<APPLET CODE="Main.class" WIDTH="800" HEIGHT="500">
</APPLET>
</div>
</BODY>
</HTML>
```

Result:

The above code sample will produce the following result in a java enabled web browser.

Welcome in Java Applet.
